

[>

Exponenciální funkce je funkce tvaru $P(t) = P_0 a^t$ kde P_0 a a jsou konstanty.

Začneme s $P(t) = 2^t$ s počáteční hodnotou $P_0 = 1$ a základem $a = 2$.

[> **P := t -> 2^t;**

$P := t \rightarrow 2^t$

[> **plot(P, -2..2);**

[>

[> **seq(P(i+1)/P(i), i=1..10);**

2, 2, 2, 2, 2, 2, 2, 2, 2, 2

[>

[Podle exponentu se pozná rychlost, s jakou si to míří do nekonečna (nebo nuly)

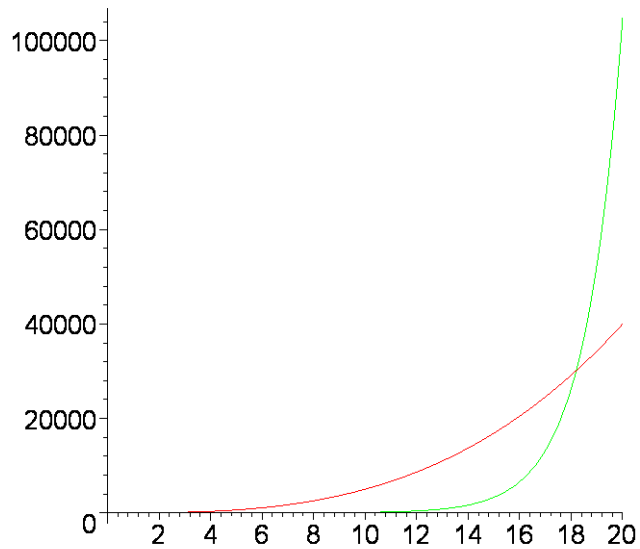

[> **f := t -> 5*t^3;**

$f := t \rightarrow 5t^3$

[> **g := t -> 0.1*2^t;**

$g := t \rightarrow 0.1 2^t$

[> **plot([f,g], 0..20, color=[red,green]);**

```
> plot([f,g], 0..20, color=[red,green],scaling=constrained,
thickness=4);
```

```
>
```

Při základu $e = 2.718281828459$ jde o exponenciálu, Maple ji volá příkazem `exp()` :

```
> f := t -> exp(t);
```

$$f := t \rightarrow e^t$$

```
> plot(f, -2..2);
```

```
> seq(f(i+1)/f(i), i=1..5);
```

$$\frac{e^2}{e}, \frac{e^3}{e^2}, \frac{e^4}{e^3}, \frac{e^5}{e^4}, \frac{e^6}{e^5}$$

```
> seq(simplify(f(i+1)/f(i)), i=1..5);
```

e, e, e, e, e

```
> seq(evalf(f(i+1)/f(i)), i=1..5);
```

2.718281829, 2.718281828, 2.718281829, 2.718281829, 2.718281829

```
>
```

```
>
```

```
> f := x -> sin(x);
```

f := x → sin(x)

```
> plot(f, 0..2*Pi);
```

```
> g := x -> cos(x);
```

g := x → cos(x)

```
> plot([f,g], 0..2*Pi, color=[red,blue]);
```

```
> plot([sin(x), 2*sin(x), 3*sin(x), 4*sin(x), 5*sin(x), 6*sin(x)],  
x=0..2*Pi, color=[red, orange, yellow, green, blue, violet]);
```

```
> plot([sin(1*x),sin(2*x)], x=0..2*Pi, color=[red,green]);
```

```
> plot([sin(x),sin(3*x)], x=0..2*Pi, color=[red,blue]);
```

```
>
```

```
>
```

Funkce tangens je v Maple **tan(x)** (ne tg(x) !!!)

```
>
```

```
>
```

```
Warning, premature end of input
```

```
> plot(tan(t), t=-3*Pi..3*Pi, -7..7, discontinuity=true,
scaling=constrained);
```
