                                 $p := x^2 - 1$ 
[ > q:=-x^2+1;
                                 $q := -x^2 + 1$ 
[ > plot([p,q],x=-4..4,color=[blue,green],thickness=3);

```

The plot displays two parabolas on a Cartesian coordinate system. The x-axis ranges from -4 to 4, and the y-axis ranges from -15 to 15. The blue parabola, representing $p = x^2 - 1$, opens upwards with its vertex at (0, -1). The green parabola, representing $q = -x^2 + 1$, opens downwards with its vertex at (0, 1). The two parabolas intersect at the points (-1, 0) and (1, 0). The x-axis is labeled with 'x' at approximately x = 2.5.

```

[ > I_L := [fsolve(p=q, x= -4..4)];
                                 $I_L := [-1.000000000, 1.]$ 
[ > I1 := Int(p-q, x=I_L[1]..I_L[2]);
                                 $I1 := \int_{-1.000000000}^1 2x^2 - 2 dx$
